ACTIVITY PACK FOR KIDS!
WELCOME!

This pack belongs to this cheeky monkey:
Slow lorises are the only venomous primate!

Howler monkeys are the world's loudest land animal!

Orangutans are gardeners of the forest - their dung piles are filled with seeds they have eaten which fertilise them, meaning more fruit grows for them to eat!

Bears have a particularly good nose: their sense of smell enables them to sniff food at a distance of several miles!

Orangutan means 'Man of the Forest' in Malay language!

Just to scratch their backs on their favourite trees, bears walk for miles!
Colour in this mask of an orangutan and then cut it out, along with the eye and side holes. Tie some string or ribbon through the side holes and it's good to go!
ORANGUTAN  RESCUE
MONKEY      BANANA
BEAR        HONEY
SLOW LORIS  FOREST
Pre-heat oven to 200C/180C fan/gas 6.

Mash your 3 peeled bananas with a fork, then mix well with the oil and brown sugar.

Next, add the flour, baking powder and cinnamon or mixed spice, and combine well.

Add the dried fruit or nuts if you wish.

Pour into an oiled, lined loaf tin and bake for 20 minutes.

Check and cover with foil if the cake is browning and then bake for another 20 minutes, or until a skewer comes out clean.

Allow your banana bread to cool a little before slicing. It’s delicious freshly baked, but develops a lovely gooey quality the day after.

HAPPY BAKING!
Tropical rainforests cover less than 3% of the Earth’s area, yet they are home to more than half our planet’s terrestrial animal species!

We share 97% of our human DNA with orangutans!

Brown bears can run up to 30mph!

1 out of 4 people worldwide depend on forests for their livelihoods.

Orangutans build tree nests, by weaving branches, twigs and leaves together into a bowl-shaped cradle!

Sloth bears have a very long and weird lower lip which is used for sucking up insects!

1 out of 4 people worldwide depend on forests for their livelihoods.
Cover your hand in paint and print it onto this bear paw! See the size difference between your hand print and a bear’s paw print.
In 2009 we established the first rehabilitation centre for orangutans in West Borneo. Since then we have rescued over 200 orangutans and are currently caring for 111. Our orangutans need rescuing because of the pet trade and deforestation. When we rehabilitate them, our team teaches them how to be orangutans again so that one day they can return to their home in the forest. They love swinging from tree to tree and eating lots of yummy fruit!

In West Java we run the biggest slow loris rehabilitation centre in the world, where we care for hundreds of lorises rescued from the cruel pet trade. All of our slow lorises are traumatised after being caught from the wild and it can take a long time for them to recover. In this same centre our team also rehabilitates rescued macaques that have been kept as pets, chained up or in tiny cages.

With our partners, Wildlife SOS and Free The Bears, we made history in 2009 and ended the 400 year old tradition of dancing bears in India. The rescued bears now live in sanctuaries in India where they are given all the love and care they need. Also, in 2017, we were alerted to the shocking plight of brown bears across Armenia. Working with local group FPWC, we began rescuing these abused and neglected animals and it’s our goal to eventually rescue them all!

Howler monkeys in Costa Rica are in danger of being electrocuted by uninsulated power lines and transformers. Often, infant howler monkeys are orphaned when their mothers die after being electrocuted. Our team provides round-the-clock treatment and lengthy rehabilitation before they are reintroduced into the forest.
THANK YOU!
HAVE A GREAT DAY
